

DAY 6 – DEPLOYMENT PREPARATION AND STAGING ENVIRONMENT SETUP

Prepare by Mohammad Umair

GIAIC
Quarter 2 Saturday 7 to 10

1. Deployment Strategy Planning.

I chose Vercel as my hosting platform, finalized the application's interaction with backend services such as Sanity CMS and third-party APIs. Link of the said deployment is given below,

<https://mktbuilder-hack-temp3.vercel.app/>

GitHub Link for Repository.

https://github.com/Umairhhanif/Mktbuilder_hack_temp3.

2. GitHub Repository Connection.

GitHub repository is linked to the hosting platform, i.e. Vercel. Configure build settings and add necessary scripts for deployment.

3. Environment Variable Configuration.

APIs securely stored in the deployment of Vercel Environment Configuration.

4. Deploy Application:

Deploy the application to a staging environment through the hosting platform. Ensure the build process completed without errors.
